Regional Sales Manager – Clean Energy Services

University of Toledo Medical Center Sustainable Filter Pilot Program

Clean Energy Services would like to recognize The University of Toledo Medical Center for taking part in our reusable air filter pilot program. By implementing this program into just one air handler on their research campus UTMC will see a significant environmental impact by eliminating approximately 20,000lbs or 589 cubic yards of non recyclable waste from reaching landfills, reducing CO2 emissions by an estimated 19,000g. Their sustainability efforts will go beyond the environmental impact as they will also be saving approximately \$102,000 in disposable filter costs over the 15-year warranted period of these Filters. We are proud to partner with UTMC as they make this commitment to go green by utilizing our sustainable filters.
